* Recycling and composting of postconsumer wastes; does not include converting/fabrication scrap. Details may not add to totals due to rounding.

** Collection of electrolytes in batteries; probably not recycled.

Neg = Less than 5,000 tons or 0.05 percent.

^ Includes collection of other MSW organics for composting.

Table 3. Materials Combusted with Energy Recovery* in the Municipal Waste Stream, 1960 to 2017

(In thousands of tons and percent of total combusted)

* Products and materials combusted with energy recovery estimated at percentage total MSW after recycling and composting. In 2016 and 2017, 19.6 percent of MSW after recycling and composting was combusted with energy recovery except for major appliances, tires and lead-acid batteries (see Table 16). No combustion with energy recovery in 1960 (see Table 35). Does not include construction & demolition debris, industrial process wastes or certain other wastes. Details may not add to totals due to rounding.

** Includes electrolytes in batteries and fluff pulp, feces and urine in disposable diapers.

‡ Nondurable goods other than containers and packaging.

§ Due to source data aggregation, PET cups are included in "Other Plastic Packaging".

* All other nondurables include plastics in disposable diapers, clothing, footwear, etc.

** Injection stretch blow molded PET containers as identified in *Report on Postconsumer PET Container Recycling Activity in 2016*. National Association for PET Container Resources. Recycling includes caps, lids and other material collected with PET bottles and jars.

† White translucent homopolymer bottles as defined in the *2016 United States National Postconsumer Plastics Bottles Recycling Report*. American Chemistry Council and the Association of Postconsumer Plastic Recyclers.

Neg. = negligible, less than 5,000 tons

HDPE = High density polyethylene

PET = Polyethylene terephthalate

PS = Polystyrene

LDPE = Low density polyethylene

PP = Polypropylene

PVC = Polyvinyl chloride

LLDPE = Linear low density polyethylene

PLA = Polylactide

‡ Other plastic packaging includes coatings, closures, lids, caps, clamshells, egg cartons, produce baskets, trays, shapes, loose fill, etc. PP and HDPE caps and lids recycled with PET bottles and jars are included in the recycling estimate for PET bottles and jars.

Other resins include commingled/undefined plastic packaging recycling.

Some detail of recycling by resin omitted due to lack of data.

* Products and materials combusted with energy recovery estimated at percentage total MSW after recovery for recycling and composting. In 2016 and 2017, 19.6 percent of MSW after recycling and composting was combusted with energy recovery except for major appliances, tires and lead-acid batteries. Does not include construction & demolition debris, industrial process wastes or certain other wastes. Details may not add to totals due to rounding.

** Not estimated separately prior to 1990.

† Other than food products.

§ Tires: tires to fuel based on industry percentage estimates applied to tire generation. *Total Miscellaneous Durables*: calculated as difference between total durable goods going to combustion and individual durable goods shown. The amounts of consumer electronics going to combustion with energy recovery are not available and are included in Total Miscellaneous Durables.

± Energy Recovery Council, 2016. Major appliances and lead-acid batteries are not accepted at waste-to-energy facilities.

Neg. = Less than 5,000 tons or 0.05 percent.

‡ Includes milk, juice and other products packaged in gable top cartons and liquid food aseptic cartons.

† Other than food products.

Neg. = Less than 5,000 tons or 0.05 percent. NA = Not Available - Detailed data not available.

Table 30. Selected Examples of Source Reduction Practices

Source Reduction Practice	MSW Product Categories			
	Durable Goods	Nondurable Goods	Containers & Packaging	Organics (Wood, Yard Waste, Food, etc.)
Product or Packaging Redesign				
Materials reduction	- Downgauge metals in appliances - Use fewer materials in electronics	- Use paperless purchase orders - Use concentrated products	- Implement container lightweighting - Use right size packaging - Eliminate unnecessary layers of packaging - Use refillable/reusable containers, including use of flexible pouches for refills for rigid containers	- Implement xeriscaping - Use just in time ordering / inventory control - Adjust menus to reduce frequently uneaten or wasted items
Materials substitution	Use of composites in appliances and electronic circuitry		- Replace rigid or heavy packaging with lighter or more compact options, e.g., cereal in bags. coffee in brick packs - Use life cycle data to choose material with lower lifecycle impact	
Lengthen product lifespan	- Use high mileage tires - Design for upgrades (e.g., add computer memory or processing capacity, battery upgrades)	- Perform regular servicing - Consider purchasing warranties to make repair more affordable - Extend warranties	- Design for secondary use - Use Reusable packaging	- Clearer label information on food expiration date - Avoid spoilage by changing: - Packaging - Storage and transportation - Supply chain management
Consumer Practices				
	- Purchase long-lived products - Perform regular servicing - Perform repair - Buy fewer items	- Perform repair - Use duplex printing - Share products - Reduce unwanted mail - Purchase concentrated products - Buy fewer items	- Purchase products in bulk (less packaging) - Use reusable bags and containers - Buy fewer items	- Donate food - Avoid spoilage by monitoring and tracking food and purchases and use - Reduce over-purchasing - Perform proper food storage and preparation - Repurpose (e.g., older bread can be made into croutons) - Perform backyard composting, vermi-composting and grasscycling
Reuse				
By Design	- Document materials and methods for disassembly/repair/reuse - Use materials and systems that exhibit modularity, and standardization to facilitate reuse and repair - Minimize connections between parts and/or make connections more accessible for ease of repair and	Use reusable shipping or mailing envelopes	- Use reusable pallets - Use returnable secondary packaging - Use reusable/refillable dispensers for cleaning products - Use reusable service ware in food service - Use durable reusable water bottles instead of disposable bottles	

Table 30. Selected Examples of Source Reduction Practices

Source Reduction Practice	MSW Product Categories			
	Durable Goods	Nondurable Goods	Containers & Packaging	Organics (Wood, Yard Waste, Food, etc.)
	- replacement of parts — Use mechanical connections with bolts and screws instead of glues, to facilitate repair — Minimize connections to increase ease of repair or part replacement — Provide adequate tolerances to allow for removal and replacement or repair of parts without affecting adjacent components			
Secondary	▪ Borrow or rent for temporary use ▪ Give to charity ▪ Buy or sell at garage sales	▪ Donate clothing, books ▪ Waste paper scratch pads	▪ Use reusable grocery sacks ▪ Reuse glass and plastic bottles and jars

Figure 1. Municipal Solid Waste in the Universe of Subtitle D Wastes

Subtitle D Wastes

The Subtitle D Waste included in this report as Municipal Solid Waste (MSW), which includes:

Containers and packaging such as soft drink bottles and corrugated boxes
Durable goods such as furniture and appliances
Nondurable goods such as newspapers, trash bags and clothing
Other wastes such as food and yard trimmings.

Subtitle D Wastes not included as MSW in this report are:

- | | |
|--|-------------------------|
| ■ Municipal sludges | ■ Agricultural wastes |
| ■ Industrial nonhazardous process wastes | ■ Oil and gas wastes |
| ■ Construction and demolition debris* | ■ Mining wastes |
| ■ Land clearing debris | ■ Auto bodies |
| ■ Transportation parts and equipment | ■ Fats, grease and oils |

*Construction and demolition debris are included in this report, but are outside of the scope of MSW.

Figure 2. Definition of Terms

The materials flow methodology produces an estimate of total municipal solid waste (MSW) generation in the United States, by material categories and by product categories.

Generation refers to the weight of materials and products as they enter the waste management system from residential, commercial and institutional sources and before recycling, composting, combustion or landfilling take place. Preconsumer (industrial) scrap is not included in the generation estimate. Source reduction activities, such as backyard composting of yard trimmings, take place ahead of generation.

Source reduction as used in this report refers to activities that reduce the amount of wastes before they enter the municipal solid waste management system. Reuse is a source reduction activity involving the recovery or reapplication of a package, used product or material in a manner that retains its original form or identity. Reuse of products such as refillable glass bottles and reusable plastic food storage containers is considered to be source reduction, not recycling.

Recycling is defined as the recovery of useful materials, such as paper, glass, plastic and metals, from the MSW stream, along with the transformation of the materials, to make new products to reduce the amount of virgin raw materials needed to meet consumer demands.

Composting is the decomposition of organic materials by aerobic microorganisms. Composting facilities manage the amount of moisture and oxygen and mixture of organic materials for optimal composting conditions. The composting process emits heat, water vapor and biogenic carbon dioxide, reducing the raw organic materials in mass and volume to create compost.¹

Combustion with energy recovery is often called “waste-to-energy,” and as used in this report refers to confined and controlled burning with energy recovery, which not only decreases the volume of solid waste destined for landfills, but can also recover energy from the waste burning process.

Landfilling refers to the MSW remaining after recycling, composting and combustion with energy recovery. These materials presumably would be landfilled in a discrete area of land or excavation that receives household waste. Some MSW, however, is littered, stored or disposed onsite; or burned onsite, particularly in rural areas. There are no good estimates for these other disposal practices available, but the total amounts of MSW involved are assumed to be small.

For the analysis of municipal solid waste in this report, products are divided into three basic categories: durable goods, nondurable goods and containers and packaging. The durable goods and nondurable goods categories generally follow the definitions of the U.S. Department of Commerce.

Durable goods are those products that last three years or more. Products in this category include major and small appliances, furniture and furnishings, carpets and rugs, tires, lead-acid batteries, consumer electronics and other miscellaneous durables.

Nondurable goods are those products that last less than three years. Products in this category include newspapers, books, magazines, office papers, directories, mail, other commercial printing, tissue paper and towels, paper and plastic plates and cups, trash bags, disposable diapers, clothing and footwear, towels, sheets and pillowcases, other nonpackaging paper and other miscellaneous nondurables.

Containers and packaging are assumed to be discarded the same year the products they contain are purchased. Products in this category include bottles, containers, corrugated boxes, milk cartons, folding cartons, bags, sacks, and wraps, wood packaging and other miscellaneous packaging.
