

BIN MAPS - SAMPLES

In order to build a sustainable recycling program, it is useful to document success in one year to ensure that it can be repeated in future years with minimum effort. With this in mind, KAB and fair staff record bin locations on the fair map. These maps are also useful for volunteers or other staff members utilizing the Bin Performance Tracking Worksheet who may not know where bins are located. See these [Indiana Map of Bins](#) and [Arlington Map of Bins](#) for examples of what a bin map may look like. Locations of the recycling bins have are numbered in red.
